[Click here](#) (if you don't want to read the mail)**Creating a Team: From Pseudo-Education to Innovation: IITians and Slow Innovation!!!**

The following article is a compilation of my recent tweets. I am putting them all here without changing anything. Thank you so much. This...

[medium.com](#)

Yes, that's a good question!

Again if I ask you, you would like to tell me that "Look dear, in IIT Delhi people come from very lower economic background, thus it is expected that they should join a company and work as a slave of BigTech\*, rather than think on their own"

Dear sir,

Your response is awesome, but what can I say, how much excuse you want to make, well you can always make, since it is just that you don't want to think and analyze but just pretend to work and keep your chair intact with yourself. (Sorry, that's just a method to express the feelings and provide a little bit of jerk, so that it can help you think clearly, people live in their own cocoon of thoughts and emotion and remain bewildered in that. Thus, it is my responsibility to provide a little bit of jerk, I know you are great and there is no question on your dedication.)

The reality is that less than 10% or to be precise less than 5% IITDians come from lower economic backgrounds, and who are they, you can spot them simply looking at them, they are literally the odd ones. (Again, I don't want to write things here which looks good and feels good. I want to make you aware about the reality.) And I am not against them, but to make it simple, I want to let you know that, if you think clearly, you can understand that for sure "pre-seed" round of money a huge percentage can afford. **Thus, money is not the issue for sure.** Reference: If you don't know what is funding, you can read here briefly: <https://www.forbes.com/sites/alejandrocremades/2018/12/26/how-funding-rounds-work-for-startups/>

The issue is very much intellectual, cultural and educational. Again, you would ask me what are these words, what is the meaning of writing three random, even a single one is enough to describe the situation. Exactly, you are right, but I need to explain you the way you understand, not the way I understand, and I surely don't know in which you are going to understand. And bear my jargon. I mean, do you want to support just those 5% of people who are at the lowest stage, or are you willing to provide an atmosphere, where great mind flourish...

The problem is all this communist mentality among professors... Most of them get lower salary than even the freshly starting BTech graduates, thus all the time they have this inferiority... Many would openly agree that, if I would have been able to crack JEE and be a BTech student at IITD, I would have rather chosen some lavish lifestyle in some blue atmosphere filled with party, alcohol and free-desires. Here, there is so much scarcity. Even after working so hard to get a PhD, degree, CSIR is not providing funding... Industries don't listen at all when we ask for a grant. This life is truly bad. Better you go and do what you want, but don't join academia on all cost... Okay! I can hear your pain... I get it...I hear you.

Well, I simply don't want to tell you truth, if you don't to hear it!

1. From Pseudo-Education to Innovation: IITians and Slow Innovation!!!  
<https://medium.com/@rksiitd/from-pseudo-education-to-innovation-creating-a-team-iit-students-no-innovation-2f15713fe3dc>
2. Picture a young IITian, fresh with the promise of a bright future, but with a singular focus: securing a high-paying job in a multinational corporation :(

Why I am writing all this here, if no one want to think why should I? Let me also go and watch reels on Instagram lol.

Wow, that guy is a professor and his real job is to create sick people. Disgraceful.

This is not ranting! This is the reality....

The real question is where will go running away from reality and until when??
